your robot gives you the lottery number (python language)

Here is a python script, which will give you the lottery numbers to play.

Last Updated: 1/17/2021

The program is planned for a draw of 5 numbers and a lucky number. (French lottery). You will need to change the lottery program in your country.

here is the python code:

```
```ï»¿import random

def loto(): table1 = [(random.randint(1,49)), (random.randint(1,49)), (random.randint(1,49)), (random.randint(1,49)),
(random.randint(1,49))] tablefin = []
doublon = []

for i in table1:
 if i not in tablefin:
 tablefin.append(i) #supprime les doublons
 else:
 doublon.append(i) #extraire les doublons
d = len(doublon)
while d > 0:
#nouveau tirage
 doublon = []
 table1 = [(random.randint(1,49)), (random.randint(1,49)), (random.randint(1,49)), (random.randint(1,49)), (random.
recherche doublon
 for i in table1:
 if i not in tablefin:
 tablefin.append(i) #supprime les doublons
 else:
 doublon.append(i) #extraire les doublons
 # si il existe doublon d+1 et vide la table
 if (len(doublon)==1)or(len(doublon)==2)or(len(doublon)==3)or(len(doublon)==4)or(len(doublon)==5):
 talkBlocking("j ai trouver un doublon , je refais un tirage")
 d = d+1
 doublon =[]
 else:
 d = 0
 break
tri la table avant de la dire
table1.sort()
Audio.Say("Voci les numéros a jouer au loto .")
Audio.Say("le "+str(table1[0]))
Audio.Say("le "+str(table1[1]))
Audio.Say("le "+str(table1[2]))
Audio.Say("le "+str(table1[3]))
Audio.Say("le "+str(table1[4]))
Audio.Say("Et le numéro chance le, "+str(random.randint(1,9)))
Audio.Say("Je vous souhaite bonne chance, ")
```

loto() ``` you will need to translate the sentences into the language of your country:

example: Audio.Say ("Here are the numbers to play the lotto.")

if you won, think of me, thank youï»¿ ...

note : To make the EZROBOT micro-controller speak, replace Audio.Say by Audio.SayEZBi»¿ . If you are interested in pthon programs, I can give you more here.
